

ADDITION TO THE UCODE3.0_MANUAL_ADDITIONS for UCODE3.06 document
in the list of options that can be specified before the END command in the
uni file:

PERFECT_PROBLEM Option – This allows the user to run phase 22 with “perfect”
computer generated observations and yet still calculate covariance and
correlations. To accomplish this, the following line should be included
after the list of observations and before the END command. Items of this
nature that were added for UCODE3.0 and later may be specified in any
order.

PERFECT_PROBLEM
